

### Feed Shortage 2018

# Dairy Australia hay and grain report

Following an unseasonably hot and dry winter in many regions, demand for feed surged across Australia. The lack of rainfall in many key dairy regions continues to drive feed prices higher and supply has diminished across mainland Australia.

Dairy Australia's hay and grain reports provide an independent and timely assessment of the hay and grain market in each dairy region. With feed already a significant input on farm, our up-to-date information allows dairy farmers to monitor prices and availability all around Australia.

To find out more about the current market outlook and read up-to-date hay and grain prices, please visit [dairyaustralia.com.au/feedshortage](http://dairyaustralia.com.au/feedshortage).
